Neat Video Gets a Big Overhaul for Version 5

EINDHOVEN, NL, May 7 — Neat Video team, ASoft continues the pursuit of video perfection with the release of the newest and most powerful version of their popular digital noise reduction software. Neat Video has long been the gold standard used by video professionals to clean up noisy clips and reduce video imperfections. Neat Video 5 makes profound improvements to all aspects of the plug-in with dramatic speed increase, better noise reduction results and a much smoother user-experience. Making the benefits of improved video quality more accessible to a wider range of users.

What's New in Neat Video 5?

In this new generation, Neat Video has been given an overhaul in both performance and user experience. Now it's easier to reach even better results, faster!

Neat Video 5 is more efficient and makes better use of available processing power to achieve significant speed improvements across a wide range of hardware configurations. CPU speeds have been increased by up to 1.5x times. In GPU bench tests both Windows GPU and MacOS GPU performance increased — with single-GPU Windows setups demonstrating the greatest improvement: up to 3.5x increase in filtration speed. The improvement in project render time may be lower though (because it involves the overhead of the video editing application) and varies from one video editing application to another.

The accuracy of the noise reduction algorithm has been improved, which helps to achieve a general improvement in the quality of processed results. Neat Video 5 also adds new features to deal with common unwanted video abnormalities. These include flicker reduction, reduction of jitter of details, improved Dust and Scratches filter and improved sharpening. These refinements add more to the video creator's toolbox and bring the user closer to the ideal of flawless video.

Neat Video development team has also aimed at making the workflow simpler and more user-friendly. This has led to the introduction of new assisting tools helping users to achieve better results more quickly.

These include adjustable generic noise profiles that give users a good starting point for accurate noise reduction. New filter check tools have also been added to make it easier to see which adjustments to make and which areas do not receive sufficient treatment. A new playback feature now makes it possible to see a live preview of the clip. This allows the user to see the effect of changes in motion and get a better feeling of the final result.

Pricing and Availability

Neat Video v5 products are available as plug-ins for a variety of video editing applications. There are several editions available with different features and licensing options.

- The Demo edition (free) is available to download and try, with limited functionality.
- The Home edition: available from \$74.90 for non-commercial use only. Supports frames of up to 1920x1080 pixels and can use up to one GPU.
- The Pro edition: available from \$129.90, may be used for commercial purposes. Can process frames of any size.
- The Studio edition (for OpenFX plug-in only): available for \$349.90, similar to the Pro edition, but uses floating licensing.

More details on the features / capabilities of each edition are available on the Neat Video website.

Neat Video 5 — Another Step Toward Video Perfection

Neat Video 5 offers better results, faster processing and enhanced usability. Adding exciting new features and dramatically better results, while helping video professionals and enthusiasts to get things done faster and achieve spectacularly smooth and flawless video. Users who wish to experience the new version can download the [Neat Video 5 free trial](#) and witness the latest advance in the pursuit of perfect video.
